

Dear business partners

As of October 5, 2016, the company **ASYST electronic d.o.o.** has been renamed to **iSYSTEM Labs d.o.o.** This was done in accordance to the company vision to unify the iSYSTEM corporate image in front of our worldwide customers. With this change taking place, iSYSTEM customers are served by the following sister companies:

- iSYSTEM Labs d.o.o. located in Ljubljana, Slovenia providing development, manufacturing and technical support services
- iSYSTEM AG located in Munich, Germany providing sales and marketing services worldwide. Their responsibility is also building and managing worldwide distribution network and doing direct sales on the German market.
- iSYSTEM USA located in San Diego, California providing direct sales and marketing in the USA and Canada.

ASYST electronic d.o.o. has been developing and manufacturing microcontroller debug and test tools under the iSYSTEM trade mark since the foundation in 1993. We will continue to do so in the future under the new iSYSTEM Labs d.o.o. name. iSYSTEM d.o.o. name, which would be a natural choice, could not be registered since too similar name exists already in the registrar of the companies. Therefore, we were forced to extend the name and we picked up **Labs**, which is an abbreviation for **Laboratories**. Many global IT companies have their Labs divisions providing research and development. Research and development is also our primary concern hence the **Labs** extension, short and not too complicated to spell over the phone when required.

Do note that only the company name has changed while the management, tax number, bank account, phones, etc. remain unchanged. Email address was adjusted to isystem.si domain although many employees have been using this domain for quite a while already. Valid e-mail is: firstname.lastname@isystem.si

In case you are our existing supplier, please use purchase@isystem.si in the future to contact our purchase department and don't forget to adjust the company name when issuing the invoices.
